BACTERIA ADVISORY LIFTED
Waters near the Roosevelt Bridge and Leighton Park test in good range

Martin County, FL – The bacteria advisory for the waters near the Roosevelt Bridge in Stuart and Leighton Park in Palm City has been lifted following a series of samples in the good range. The areas will be tested again on Monday, February 18.

Enteric bacteria inhabit the intestinal tract of humans and animals and their presence in recreational waters is an indication of fecal pollution. The presence of these bacteria may come from storm water runoff, pets, wildlife and human sewage.

The Florida Department of Health in Martin County conducts weekly water sampling at four sites along the St. Lucie River including the Roosevelt Bridge, Sandsprit Park, Leighton Park and the Stuart Sandbar.

Martin County beach sites are sampled every other week.

River and beach water sample results can be viewed at: http://martin.floridahealth.gov/programs-and-services/environmental-health/beach-and-river-sampling/results/index.html

About the Florida Department of Health

The department, nationally accredited by the Public Health Accreditation Board, works to protect, promote and improve the health of all people in Florida through integrated state, county and community efforts.
